Summary

Driven Computer Science and Engineering undergraduate specializing in backend systems, applied AI, and mobile engineering. Experienced in building scalable APIs, cloud-deployed solutions, and autonomous AI agents. Seeking a software engineering internship to contribute to large-scale platforms and innovative AI-driven initiatives.

Projects

- Smart Attendance and Classroom Access Platform [GitHub Repository](#)
Currently developing the Smart Attendance and Classroom Access Platform to modernize university attendance tracking and eliminate proxies. The system features a cross-platform mobile app, a staff web dashboard, and a scalable microservices backend communicating via REST APIs. By implementing a secure two-phase verification process using a Face Recognition System and GPS geofencing, the platform automates check-ins, delivers real-time analytics, and ensures high data integrity while reducing administrative overhead.
- FitLock (AI App-Locker) | [Feb 2026 - Ongoing] | [View on Google Play](#)
Designed and deployed a productivity and fitness application that locks distracting apps, requiring users to complete physical exercises to unlock them. Initially built using React, Vite, and Capacitor, the frontend architecture is currently being migrated to React Native to optimize rendering speed and native performance. Leveraged MediaPipe Pose for on-device AI pose detection and machine learning functionality.
- PrajaNavigator (AI Insight Platform) | [June 2026] | [GitHub Repository](#)
Engineered a RAG system integrated with computer vision to analyze complex datasets, delivering actionable intelligence via specialized user and admin dashboards. Built with a Python-based backend for intelligent data handling, utilizing React and Tailwind CSS for streamlined interfaces, with containerized deployment managed via Docker Compose.
- HackerRank Orchestrate May - AI Agent | [May 2026] | [GitHub Repository](#)
Designed and deployed an autonomous AI support agent architecture to handle live queries and automate ticket triage for HackerRank, Claude, and Visa platforms, ranking 81st over 1400+ submissions. Utilized a localized vector database via ChromaDB and HuggingFace for private retrieval, employing LangGraph to manage deterministic workflows for the agent. Built with Python and Pydantic to ensure structured responses from Google Generative AI while managing risk through automated escalation protocols.

Technical & Professional Skills

- Programming Languages: Python, C++, JavaScript, TypeScript.
- Web & Mobile Development: MERN Stack, React Native, RESTful API design, Frontend/Backend integration, Responsive Web Design.
- AI & Computer Vision: TensorFlow.js, MediaPipe
- Databases: MySQL, MongoDB, PostgreSQL.
- Development Tools & Workflow: Git/GitHub, Containerization(Docker), Postman.

Certifications

- Professional Agent Architect Certification | Google cloud
- Google play store listing certificate | Google play academy

Education

- BSc (Hons) in Computer Science & Engineering | University of Moratuwa (3rd year) | [2024] – Present
- GCE Advanced Level | Dharmapala College (3 As, Z-Score: 2.12) | [2023]

Leadership & Extracurricular Activities

Leadership Roles

- Marketing Committee Lead | MazeX 1.0 - Micromouse competition (May 2026 – Present)
- Matlab webinar series - IET | Co-chair (July 2026)

Societies

- IEEE RAS | Web and Marketing pillar member (Feb 2026 – Present)
- Moraspirit Marketing pillar member (March 2025 – Present)
- Operational pillar Member | IET On Campus (March 2026 – Present)

Sports

- Team Member | Taekwondo, University of Moratuwa (2025 – Present)
